

Thank you for purchasing a license to use this set of high-quality profiles for the Kemper-Profiling-Amp.

You can freely use this profiles to create any kind of music, soundtracks or even #1 hits or whatever you like.

As with similar products - all profiles are copyright protected by law - you do not own them - you purchased only a license to use them.

A part of your name and/or your ordering number may be stored in the profiles.

Please support our work by NOT sharing this profiles or any modifications of them.

**Note:**

Please make a backup of your own profiles before you install any of the profiles from this pack.

Please do not rename or modify any of the profiles with an external editor since it could crash your Kemper.

(This is true for all profiles/rigs not only for ours)

**How to install?**  
-----

- 1) Prepare a USB stick according to the user manual
- 2) On the USB stick you'll find a folder 'Shared' (if not - goto step 1)
- 3) Copy the profiles you like to import into this folder (do not create any subdirectories)
- 4) Import the profiles/rigs according to the user manual
- 5) You'll find your new profiles/rigs by name (starting with 'AH') or by User ('Soundside.de')

**Directory '01-Raw-Profiles'**  
=====

Profiles of a Vox AC30 Combo Tube Amp with 2x12" 'Vox Blue Bulldog' speakers at various settings.

Profiling was VERY loud and the power amp and speaker distortion kicked in at higher volume levels.

The Vox has no numbers printed on or around the knobs - so we use a clock scheme (12:00 = neutral)

This amp has a Normal (N) and a TopBoost (TB) channel.

The Normal channel (N) can be used with Normal (NN) or Bright (NB) options - we profiled the amp at both settings.  
Volume 9:00 (V09) is very clean and volume 13:00 (V13) is the pushed sound of the normal channel.

The TopBoost (TB) channel has a Standard (TBS) and Custom (TBC) option - we profiled both settings at volume 9 (V09).  
Higher volume settings were all profiled with the Custom option (TBC).

We profiled the TopBoost Custom setting at various volume settings - this leads to a more and more distorted sound.

Naming convention:

AH AC30 Channel/Mode Vxx

AH = our prefix

AC30 = Vox AC30

NN = Normal Channel - Normal Mode

NB = Normal Channel - Bright Mode

TBS = TopBoost Standard

TBC = TopBoost Custom

TBCJump = Both channels jumpered

Vxx = Volume setting (clock scheme)

All tone controls were at a neutral (12:00) position during the profile session.  
Feel free to change the sound with the KPA EQ-Block or add an EQ-Effect before and/or after the stack

Directory '02-Mods'

=====

Here are modifications of the above profiles created by us.

Note:

You can combine the Amp or Cabinet models found in this pack with other Amp and/or Cabinet profiles in your KPA.
