

Thank you for purchasing a license to use this set of high-quality profiles for the Kemper-Profiling-Amp.

You can freely use this profiles to create any kind of music, soundtracks or even #1 hits or whatever you like.

As with similar products - all profiles are copyright protected by law - you do not own them - you purchased only a license to use them.

A part of your name and/or your ordering number may be stored in the profiles.

Please support our work by NOT sharing this profiles or any modifications of them.

Note:

Please make a backup of your own profiles before you install any of the profiles from this pack.

Please do not rename or modify any of the profiles with an external editor since it could crash your Kemper.

(This is true for all profiles/rigs not only for ours)

How to install?

- 1) Prepare a USB stick according to the user manual
- 2) On the USB stick you'll find a folder 'Shared' (if not - goto step 1)
- 3) Copy the profiles you like to import into this folder (do not create any subdirectories)
- 4) Import the profiles/rigs according to the user manual
- 5) You'll find your new profiles/rigs by User ('Soundside.de')

Profiles of an Orange Dark Terror at various Gain and Shape combinations - 4x12" Elmwood cabinet with Vintage30 speakers used (That's why the V is at the end of the name DarkV).

This profiles were created at gig level - yes it was VERY loud.

We used a SM57 microphone and adjusted the sound with the EQ in the X slot of the KPA.

Feel free to switch this EQ on or off to change the overall sound.

Some profiles were done by using a MesaBoogie Thiele cabinet with C90 speakers (they have an C at the end of the name).

For each gain setting we included a rig with a MesaBoogie Rectifier 4x12" cabinet - this cabinet profile is out of Tills free cabinet collection and end with a 'T'.

(Thank you Till for the permission to use this)

The Orange Dark Terror has only 3 knobs and two switches.
Volume for the overall volume this does not change the sound and was fix for all profiles.

15 / 7Watt switch. This was set to 15 Watt for all profiles.

Gain = The amount of distortion we profiles the amp at Gain

09,10,11,12,13,14,15,16,17

Shape = This amp has only one tone control, but this one is VERY powerful.

We profiled this settings for each gain setting:

07 = Less bass, more treble

09 = More treble

10 = Max bass

12 = Default setting

14 = Scooped mid's

17 = Max Scooped mid's

Directory '01-Raw-Profiles'

=====

DarkV G09 S12

DarkV = Orange Dark Terror

G09 = Gain at 9 o clock

S12 = Shape at 12 o clock

Directory '02-Mods'

=====

Here are some modifications = tweaked profiles with all the KPA features and some effects.
