

Thank you for purchasing a license to use this set of high-quality profiles for the Kemper-Profiling-Amp.

You can freely use this profiles to create any kind of music, soundtracks or even #1 hits or whatever you like.

As with similar products - all profiles are copyright protected by law - you do not own them - you purchased only a license to use them.

A part of your name and/or your ordering number may be stored in the profiles.

Please support our work by NOT sharing this profiles or any modifications of them.

Note:

Please make a backup of your own profiles before you install any of the profiles from this pack.

Please do not rename or modify any of the profiles with an external editor since it could crash your Kemper.

(This is true for all profiles/rigs not only for ours)

How to install?

- 1) Prepare a USB stick according to the user manual
- 2) On the USB stick you'll find a folder 'Shared' (if not - goto step 1)
- 3) Copy the profiles you like to import into this folder (do not create any subdirectories)
- 4) Import the profiles/rigs according to the user manual
- 5) You'll find your new profiles/rigs by name or by User ('Soundside.de')

Directory '01-Raw-Profiles'
=====

Profiles of a Mesa Boogie Lonestar Special Tube Amp via a 4x12" Elmwood V30 cabinet at various level settings.

A Rode NT1000 microphone was used to capture the sound.

This profiles were created at gig level - yes it was VERY loud and the power amp and speaker distortion kicked in.

Feel free to add effects to your liking.

All knobs were at 12:00 = noon.

The gain, treble and presence knobs were at various settings - see below.

The LSS has 3 power modes 30Watt, 15Watt, 5 Watt.
The 30Watt mode uses a solid state rectifier while the 15 and 5Watt mode uses a tube rectifier.

This lead to a different feel (different power amp sagging) - the KPA can not automatically detect this.

If you like to get the feeling of this lower power modes increase the power amp sagging in the KPA amp settings page.

For the profiles we used the 30Watt mode all the time.

If you own the Pack4 'SpecialStar-Pack' - then these profiles have a similar naming but the new ones have a 'NT' at the end of the name.

Naming convention:

LSS C1 10 T12P12 NT

LSS = LoneStarSpecial

C1 = Channel 1

10 = Gain at 10:00

T12 = Treble at 12:00

P12 = Presence at 12:00

For channel 2:

DOff = Drive off (Channel2 has an additional switchable drive - DOn14 = Drive on at 14:00)

N = Nomal mode (in addition are there T=Ticker and T+=Tickest)
